Ver. 2024/01

VALIDITA'

dal 01/05/2024 al 31/05/2024

CODICE

NanobodyHU

Sconto del 20% sui Nanobody Huabio

Advantages of using an Alpaca Recombinant Secondary

- **Smaller size**
Nanobodies are 1/10 the size of a traditional antibody (~15 kDa unconjugated). This means that the nanobody can penetrate tissue faster and deeper than other antibodies.
- **Easier to use**
Due to their simple structure, nanobodies also have the advantage of increased stability and ease of use.
- **Easier production**
When compared to a more traditional antibody, nanobodies are easier to develop and produce in the lab than monoclonal or polyclonal antibodies.
- **More consistent**
Since nanobodies are recombinantly produced from clonal DNA, you are guaranteed the same product every time. Comparatively, polyclonal antibodies are produced in live animals and have a very low lot-to-lot consistency while monoclonal antibodies can suffer from drift.
- **Higher Affinity**
Nanobodies benefit from consistently high binding affinity values.
